* Due to a large number of light source types, the maximum load depends on the internal construction of dimmable LEDs and ESL bulbs and their power factor $\cos \varphi$. The power factor of dimmable LEDs and ESL bulbs ranges from $\cos \varphi = 0.95$ to 0.4. An approximate value of maximum load may be obtained by multiplying the load capacity of the dimmer by the power factor of the connected light source.

Warning: it is not allowed to connect inductive and capacitive loads at the same time.

- Designed for dimming of incandescent bulbs and halogen lights with wound or electronic transformer, dimmable light bulbs and dimmable LED².
- Automatically regulates the intensity of light in a room.
- External sensor scans the intensity and based on the preset value it decreases or increases the brightness of light.
- Operating status:
 - 1 - Off
 - 2 - Automatic regulation
 - 3 - Cleaning (maximum level of illumination)
 - 4 - Setting the minimum lighting brightness
 - 5 - Setting the desired level of illumination.
- Optional connection of buttons with 50 neon lamps.

Function

T-button control:

- pressing button shortly (< 0.5 s) always turns of lamp
- pressing button longer (0.5 to 3 s) turns on lamp in automatic regulation mode
- pressing button long (> 3 s) turns on lamp to full illumination - „cleaner“ mode
- after turning on the power supply, the dimmer is always turned off.

Thyristor B:

- serves to block automatic regulation (lamp turns off).
- WARNING!** The lamp may be turned on in “cleaner” mode even while blocked.
- After ending block mode, the lamp remains off.
