

# RESTAURANT

## Restaurant solutions

You serve your customers first-class dishes. We will take care of the perfect atmosphere.

### Objective:

The right restaurant, bistro or café has long been not just a culinary experience. Today's trends also put emphasis on a relaxed atmosphere, pleasant lighting and music. So if you're renovating or building a new restaurant right now, it's high time to get a smart electrical installation

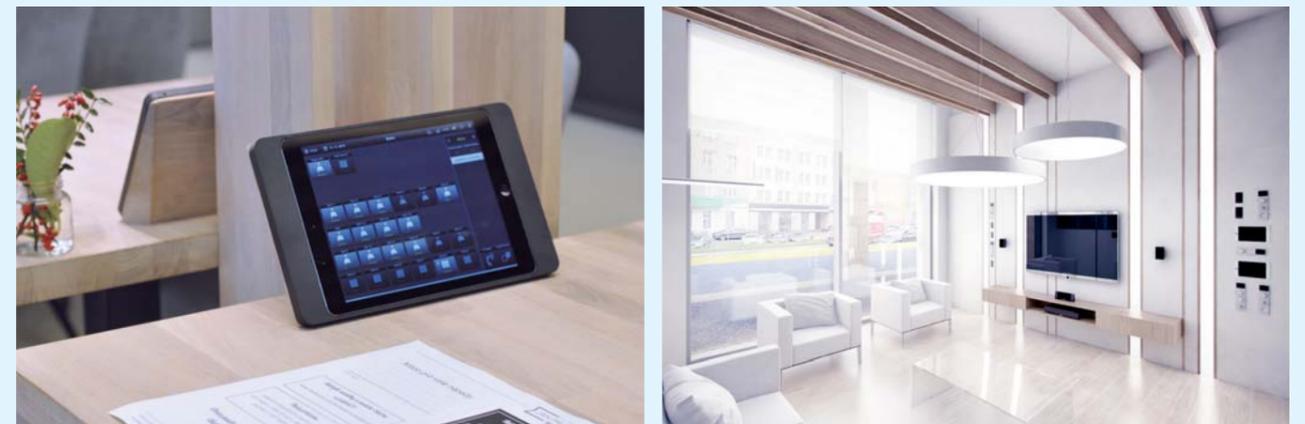

to help your customers get the most enjoyable feeling when visiting your business. Try smart controlled lighting, blinds or music, as we have in the iNELS Café in Prague at Rohanské nábřeží.

### Solution:

The whole system works quite simply. The restaurant is managed by one central unit, which can be operated by the wall switches and the iHC mobile / tablet application that a visitor has at each table. This increases the comfort of every guest, who can determine the brightness of the lights according to their current mood. At the same time, costs are saved - above the table, where no one is sitting at the moment; the light is not unnecessarily illuminated. The entire light control system works with the DALI bus and the controlled transmitter from the iNELS system. You cannot just control the lights at the table,

you can also browse the restaurant's daily menu or check out weather forecasts or surf the internet.

The operator can centrally control the entire restaurant with the touch panel at the bar. The Lara multimedia player, connected to the ceiling speakers and controlled by a mobile application, takes care of the sound of the entire space. The entire system can be switched to a „stand-by“ mode by pressing one button, where the main lights are off, all the blinds are pulled down and the evening lights are illuminated.

### Advantages:

- Effective use of lighting makes the business more attractive to customers.
- Customers can adapt the atmosphere to their individual needs.
- The business owner saves costs and gains more customers.
- The staff can check the entire restaurant at one time, making it easier for them to work, leaving them more time to meet customers' needs, improving service quality.
